

Design Your Own Refugee Camp

- Let us assume that this section of the camp will initially contain 120 refugees. Several factors should be taken into account in deciding how the facilities and shelters will be located:
 - Space required per person
 - Accessibility of services
 - Minimum distance required between facilities and shelters
 - Cultural habits and social organization of the refugee population (clans and extended families)
 - Ethnic and security factors, relationships among different sections/members of the community, etc.
- Since there is a lot of details to cover, individual students may want to take on the role of various experts to make sure that all functions are covered:
 - Sanitation
 - Water
 - Housing
 - Food supply
 - *and other issues!*
- Begin by listing **all** of the facilities required.

Shelter space per person	3.5 m ²
Number of people per water point	250
Number of people per latrine	20
Distance to waterpoint from shelter	150 m max.
Distance to latrine from shelter	30 m
Distance between waterpoint and latrine	100 m
Distance between two shelters	2 m min.
